Market: Akumina

Prepared for

Akumina

Generated on February 2, 2026

Prepared by Chris McNulty

Company Baseline

Akumina

https://www.akumina.com

Akumina provides an employee experience platform and SharePoint-based intranet solution built on Microsoft 365. They help organizations create personalized, mobile-ready digital workplaces that connect employees to information, the business, and each other while maximizing existing Microsoft investments.

Competitors Overview (10)

Competitor	Summary	Status
MI **Microsoft SharePoint** https://www.microsoft.com/en-us/microsoft-365/sharepoint/collaboration Score: 50/100	Unable to determine from blocked content	Active
MA **MangoApps** https://www.mangoapps.com Score: 54/100	A unified employee experience platform that gives managers one place to communicate, run daily operations, and support teams - particularly focused on keeping frontline and deskless workers connected ...	Active
SI **Simpplr** https://www.simpplr.com Score: 60/100	Simpplr One is the leading AI-powered employee experience platform that unifies intranet, search, and service delivery into a single solution, eliminating workplace fragmentation and enabling employee...	Active

Competitor	Summary	Status
HA **Happeo** https://www.happeo.com Score: 60/100	Happeo is an AI-powered knowledge hub that centralizes, verifies, and keeps company knowledge searchable and up-to-date by connecting to existing tools (Google Workspace, Microsoft 365, Slack), elimin...	Active
IN **Interact Software** https://www.interact-intranet.com Score: 47/100	An AI-powered, all-in-one employee experience platform that delivers personalized, multi-channel communications to every employee (including frontline/deskless workers) while eliminating disconnected ...	Active
LU **LumApps** https://www.lumapps.com Score: 55/100	Enterprise-grade intranet platform that unifies communications, productivity tools, and business applications into a single AI-powered employee hub, delivering measurable ROI through increased product...	Active

Messaging Comparison

Our Position: Transform outdated intranets into engaging employee experiences that drive actual adoption and usage

Competitor: Securely collaborate

Our Position: Maximize your Microsoft 365 investment with native SharePoint integration that reduces risk and complexity

Competitor: One unified platform for communication, operations, and engagement - eliminates system fragmentation

Our Position: Partner approach that provides strategic guidance, expert support, and actionable insights—not just software

Competitor: AI-powered platform combining AI Intranet, AI Search, and AI Agents for comprehensive employee experience

Confidential - synozur.com | Generated February 2, 2026

Identified Gaps

AI-Powered Capabilities Messaging

High

All major competitors (Simpplr, LumApps, Unily, Staffbase, Happeo) prominently position themselves as 'AI-powered' or 'AI-native' platforms with specific AI features (AI Search, AI Agents, AI-powered workflows). Akumina's positioning documents make no mention of AI capabilities despite this being a dominant competitive differentiator. Competitors emphasize AI as core to their value proposition ('fastest way to bring AI to every employee' - Simpplr, 'AI-native' - Staffbase), while Akumina focuses on traditional partnership and integration messaging.

Frontline/Deskless Worker Focus

High

Six competitors (MangoApps, Interact, LumApps, Unily, Viva Connections, Staffbase) explicitly target frontline, deskless, and field workers as a primary audience segment with mobile-first experiences. MangoApps and Staffbase particularly emphasize being 'built specifically for frontline workers' and 'hardest-to-reach employees.' Akumina's target audience focuses only on 'IT decision-makers, internal communications leaders, HR leaders, and CxOs' without addressing the frontline workforce segment, missing a significant market opportunity that competitors actively pursue.

Analyst Recognition and Third-Party Validation

High

Multiple competitors prominently feature industry analyst recognition in their core positioning: Simpplr ('3x Gartner Leader, 4x Leader across major analysts'), LumApps ('3x Gartner Magic Quadrant Leader'), Unily ('triple leader by Gartner, Forrester, IDC'), and Staffbase ('Gartner Magic Quadrant Leader for 3 consecutive years'). Akumina's positioning documents contain zero mention of analyst recognition, awards, or third-party validation, missing a critical trust-building and differentiation element that competitors use heavily to establish market authority and credibility.

Quantified ROI and Business Outcomes

Medium

Competitors lead with specific, measurable business outcomes in their value propositions: Simpplr ('282% ROI, 95% customer retention, 2M+ active users'), Powell Software ('saves 2.5+ hours per employee per week, 3x ROI'), LumApps ('saves $300k in IT costs'), and Happeo ('high employee engagement rates'). Akumina's messaging focuses on qualitative benefits ('experiences that people actually love and use,' 'reduce risk and complexity') without quantified metrics or ROI data, making it

harder for buyers to justify investment compared to competitors who provide concrete financial and productivity metrics.

Platform Consolidation Value Proposition Medium

Several competitors (MangoApps, Interact, LumApps, Powell Software) position themselves as platform consolidators that 'replace 50+ disconnected apps' or 'eliminate system fragmentation,' emphasizing cost savings and reduced complexity from tool consolidation. While Akumina mentions 'integration flexibility with hundreds of platforms,' it positions this as adding capability rather than consolidating/replacing tools. Competitors frame consolidation as a primary value driver ('one unified platform,' 'centralize tech stacks'), whereas Akumina's integration message could be perceived as adding another tool to the stack rather than simplifying it.

Recommendations (10)

Build Mobile-First User Experience Design System and Showcase Medium Impact

Develop and prominently market a mobile-first design system and component library specifically optimized for frontline/deskless worker experiences (large touch targets, offline-capable, low-bandwidth optimized, single sign-on with mobile credentials). Create a public-facing showcase of mobile experience templates and demos that demonstrate mobile UX parity with competitors. Feature mobile screenshots prominently in all marketing materials rather than desktop-focused visuals. This supports the frontline worker audience expansion while providing tangible evidence that Akumina delivers mobile-native experiences, not just mobile-responsive web views.

Area: Features

Launch 'Platform Consolidation' Value Narrative with Integration Audit Service Medium Impact

Reposition Akumina's integration capabilities through a platform consolidation lens rather than 'connecting hundreds of systems.' Develop messaging framework that identifies which specific tools Akumina can replace or consolidate (competing with MangoApps' '50+ apps' and Interact's 'replace disconnected tools' positioning). Create a complementary 'Integration Audit Service' where Akumina consultants analyze a prospect's current tech stack and map which systems can be consolidated, which require integration, and the net cost savings—delivering a customized consolidation roadmap. This transforms integration from a complexity add-on into a strategic cost reduction and simplification story.

Area: Messaging

Create Industry-Specific ROI Calculators and Value Assessment Tools

Medium Impact

Build interactive ROI calculators and total cost of ownership (TCO) tools tailored to Akumina's key industries (healthcare, financial services, manufacturing) that quantify specific business outcomes: hours saved per employee per week, cost of tool consolidation, productivity gains from better information findability, reduction in IT support tickets, and communication reach improvements. Model these after Powell Software's '2.5+ hours saved' and Simpplr's '282% ROI' quantified messaging. Package these tools as gated content assets with accompanying case studies that provide the backup data, making them sales enablement tools that counter competitors' specific metrics with Akumina's own proof points.

Area: Content

Develop AI Feature Parity Roadmap and Go-to-Market Strategy

High Impact

Conduct competitive AI feature gap analysis across the product portfolio (AI Search, AI Agents, AI-powered workflows, content tagging, personalization, chatbots) to identify specific capabilities competitors are promoting. Create a 12-18 month roadmap to build or partner for AI feature parity in high-impact areas. Simultaneously, audit existing Akumina AI/ML capabilities (if any) that are not currently marketed and package them with 'AI-powered' messaging. Launch interim messaging campaign around 'AI-ready platform' and 'Copilot-compatible' positioning (leveraging Microsoft partnership) while building net-new AI features. This addresses the positioning gap immediately while building toward long-term product parity.

Area: Features

Establish Third-Party Validation and Awards Program

High Impact

Launch a systematic campaign to pursue and prominently feature analyst recognition (Gartner, Forrester, IDC, G2), industry awards, and customer review platforms. Create dedicated positioning assets that lead with credibility markers ('Recognized by...', 'Leader in...') similar to how Simpplr, LumApps, Unily, and Staffbase leverage their 'triple leader' and 'Magic Quadrant' recognition. Update homepage, sales decks, and executive presentations to feature these validations in hero sections, not buried in footer logos. Allocate budget for analyst briefings, award submissions, and customer advocacy programs to generate third-party proof points that match competitive authority positioning.

Area: Positioning

Build Multi-Channel Communication Capability Messaging

Medium Impact

Audit and enhance product capabilities for multi-channel employee reach (mobile app, email, SMS, push notifications, digital signage, desktop) and build messaging framework around 'omnichannel

employee experience.' Create feature comparison showing Akumina's channel coverage vs. competitors, develop use cases for each channel (e.g., 'Critical safety alerts via SMS to factory workers,' 'Personalized onboarding journeys across mobile and desktop'), and produce content demonstrating how organizations reach 100% of employees regardless of work location or device access. If capability gaps exist, prioritize roadmap investment in missing channels before launching messaging.

Area: Features

Reframe Microsoft 365 Integration as Consolidation, Not Addition

High Impact

Shift messaging from 'maximize your Microsoft 365 investment' to 'consolidate your digital workplace into Microsoft 365.' Emphasize how Akumina eliminates the need for 5-10 other enterprise tools (create specific list: separate intranet platforms, employee apps, communication tools, knowledge bases, workflow systems) by unifying everything within the Microsoft ecosystem. Develop messaging like 'One platform that replaces fragmented tools while leveraging your existing Microsoft investment' and create TCO calculators showing license cost savings from tool elimination. Build competitive battle cards showing tool consolidation advantages vs. standalone platforms.

Area: Positioning

Develop Quantified ROI Framework with Customer Proof Points

High Impact

Build a data-backed ROI calculator and messaging framework with specific metrics: hours saved per employee per week, productivity gains percentage, engagement rate improvements, and cost savings from tool consolidation. Work with 5-10 key customers to develop detailed case studies with quantified outcomes (e.g., 'Global manufacturing company saved 3.2 hours/employee/week, achieved 78% daily active usage, reduced 12 disconnected tools to 3'). Feature these metrics prominently on homepage (above the fold), in sales decks, and create a dedicated 'Results & ROI' page. Train sales team to lead discovery conversations with ROI quantification frameworks.

Area: Messaging

Launch Frontline & Deskless Worker Solution Track

High Impact

Create a dedicated 'Frontline Employee Solution' with targeted messaging, use cases, and product packaging that addresses non-desk workers. Develop industry-specific messaging for manufacturing, healthcare, retail, and logistics emphasizing mobile-first access, no-email-required communication, and operational workflow integration. Build case studies showing how Akumina reaches frontline workers through branded mobile apps, SMS/push notifications, and digital signage integration. Add 'Frontline Workers' to target audience segments across website navigation and create dedicated

landing pages for this audience with proof points (e.g., 'Reach 100% of your workforce, including 10,000+ factory floor employees').

Area: Messaging

Adopt AI-Native Positioning as Core Platform Identity

High Impact

Rebrand Akumina's core messaging to position as an 'AI-powered employee experience platform' that enhances Microsoft 365 investments. Develop and prominently feature 3-5 specific AI capabilities (e.g., AI-powered search, intelligent content recommendations, automated personalization, AI-driven analytics) on homepage, product pages, and sales materials. Create dedicated 'AI Features' section showcasing concrete use cases like 'AI that learns employee preferences to surface relevant content' or 'Intelligent automation that reduces manual intranet maintenance by X hours/week.' This should not replace Microsoft 365 integration messaging but rather position AI as the enabler that maximizes that investment.

Area: Positioning

Competitive Battle Cards (10)

Viva Connections (Microsoft)

THEIR STRENGTHS

- Native Microsoft Teams integration provides seamless access within existing workflow for Teams-heavy organizations
- Included with certain Microsoft 365 licenses (E3/E5), presenting perceived lower incremental cost for existing Microsoft customers
- Strong brand recognition and enterprise trust as a Microsoft first-party product with unified support model

THEIR WEAKNESSES

- Limited customization and extensibility compared to purpose-built intranet platforms - constrained by Microsoft's out-of-box templates and widgets
- Shallow content management capabilities with basic publishing workflows, lacking advanced governance, taxonomy, and multi-site management features
- Locked into Microsoft ecosystem with minimal flexibility for organizations with heterogeneous technology stacks or unique integration requirements

OUR ADVANTAGES

- Deep SharePoint expertise with enterprise-grade content management, advanced taxonomy, multi-site architecture, and sophisticated governance capabilities that Viva Connections cannot match
- Highly customizable and extensible platform with white-label capabilities, custom widgets, advanced personalization engines, and flexible design options beyond Microsoft's template limitations
- Platform-agnostic integration framework supporting diverse enterprise systems (SAP, Workday, Salesforce, ServiceNow) while still maximizing Microsoft 365 investments - not locked into Microsoft-only ecosystem

Powell Software

THEIR STRENGTHS

- Strong positioning in regulated industries (finance, legal, healthcare, pharma, government) with compliance and governance features baked into their solution
- Proven ROI metrics with compelling claims of 2.5+ hours saved per employee weekly, 70%+ engagement rates, and 3x Microsoft ROI
- AI-powered search and personalization capabilities that directly address SharePoint's poor native user experience

THEIR WEAKNESSES

- Narrow industry focus on regulated sectors may limit their feature set and innovation for broader use cases beyond compliance-heavy environments
- Completely dependent on Microsoft 365/SharePoint infrastructure with no multi-platform flexibility or cloud-agnostic capabilities
- Focus on solving SharePoint adoption problems suggests a reactive approach rather than proactive employee experience innovation

OUR ADVANTAGES

- Akumina offers a purpose-built employee experience platform with broader digital workplace capabilities beyond just making SharePoint usable, including multi-site orchestration, advanced personalization engine, and enterprise-grade experience management
- Our platform serves all industries with flexible, configurable solutions rather than being narrowly specialized for regulated sectors, allowing faster innovation and broader best practices
- Akumina provides superior mobile-first experiences and omnichannel delivery that connects employees across any device, location, or endpoint - not just within Microsoft's ecosystem

Unily

THEIR STRENGTHS

- Strong analyst recognition as triple-Leader (Gartner, Forrester, IDC) with proven enterprise credibility and social proof
- AI-native platform with emphasis on organizational velocity and measurable outcomes (30-point engagement increases, 99% adoption rates)
- Deep experience serving large distributed enterprises (5M+ users, 155+ customers with 10K+ employees) across frontline-heavy industries

THEIR WEAKNESSES

- Platform-agnostic approach may create complexity for organizations heavily invested in Microsoft 365 ecosystem, potentially requiring additional integration overhead
- Enterprise-only focus (1,000+ employees minimum) with premium positioning likely results in higher costs and longer implementation timelines compared to Microsoft-native solutions
- Governance and AI features may require significant change management for organizations seeking simpler, more familiar SharePoint-based experiences

OUR ADVANTAGES

- Native Microsoft 365 and SharePoint foundation maximizes existing technology investments with seamless integration, familiar governance models, and lower total cost of ownership
- Purpose-built on Microsoft stack provides faster deployment, easier administration, and leverages existing IT skills and security frameworks already in place
- Flexible deployment options serve mid-market to enterprise with personalized experiences without requiring platform replacement or complex multi-system orchestration

LumApps

THEIR STRENGTHS

- Dual platform support for both Microsoft 365 and Google Workspace, making them attractive to multi-platform enterprises
- Strong analyst recognition as a Leader in both Gartner Magic Quadrant and Forrester Wave, providing third-party validation
- AI-powered features including intelligent search, personalization, and workflow automation that appeal to digital transformation initiatives

THEIR WEAKNESSES

- Dual-platform approach means less deep specialization in Microsoft 365 compared to Microsoft-native solutions, potentially limiting advanced SharePoint and M365 feature utilization
- Higher complexity and overhead for organizations fully committed to the Microsoft ecosystem who don't need Google Workspace integration
- Premium pricing structure targeting large enterprises may result in feature bloat and unnecessary costs for mid-market Microsoft shops

OUR ADVANTAGES

- Deeper Microsoft 365 and SharePoint native integration - purpose-built to maximize existing Microsoft investments rather than spreading across multiple platforms
- More focused product roadmap aligned exclusively with Microsoft innovation cycles, ensuring faster adoption of new M365 features and tighter security integration
- Better ROI for Microsoft-committed organizations by eliminating the cost premium associated with maintaining dual-platform capabilities they won't use

Interact Software

THEIR STRENGTHS

- Strong multi-channel communication capabilities including digital signage and newsletters, appealing to organizations with distributed workforces
- Emphasis on reaching frontline and deskless workers with mobile-first solutions, addressing an underserved market segment
- Integrated platform approach that consolidates multiple tools (recognition, surveys, communications) without requiring separate bolt-on solutions

THEIR WEAKNESSES

- Limited native integration with Microsoft 365 ecosystem compared to SharePoint-native solutions, creating potential friction for organizations heavily invested in Microsoft
- Platform consolidation may require organizations to abandon existing specialized tools that perform specific functions better than an all-in-one solution
- AI capabilities appear to be marketing-forward without clear differentiation of specific AI features or demonstrable ROI compared to competitors

OUR ADVANTAGES

- Native SharePoint foundation maximizes existing Microsoft 365 investments with seamless integration, governance, and security inheritance rather than requiring parallel systems
- Purpose-built digital workplace platform with deeper customization and enterprise-grade scalability for complex organizational structures and branding requirements
- Proven track record with Microsoft-centric enterprises who need sophisticated personalization while maintaining IT control, compliance, and data residency within their Microsoft tenant

Happeo

THEIR STRENGTHS

- Strong AI-powered search and knowledge management capabilities with automated content review and gap detection
- Deep dual integration with both Google Workspace and Microsoft 365, appealing to multi-platform enterprises
- User-friendly, no-code platform with high reported engagement rates (near 100% employee usage) and strong G2 ratings (4.5/5)

THEIR WEAKNESSES

- Limited native SharePoint integration depth - treats Microsoft 365 as just another connection point rather than a foundation to build upon
- Newer platform with less maturity in enterprise-scale customization, branding, and complex workflow automation compared to established solutions
- Focused primarily on knowledge management and search rather than comprehensive employee experience capabilities like personalization, journey mapping, and multi-channel engagement

OUR ADVANTAGES

- Built natively on SharePoint and Microsoft 365 architecture - maximizing existing Microsoft investments with deeper integration, governance, and compliance rather than adding another layer
- Comprehensive employee experience platform beyond just knowledge management - includes personalized journeys, multi-device experiences, advanced branding, and lifecycle engagement tools
- Enterprise-proven customization and extensibility with robust developer framework, custom widgets, and complex business process integration for organizations with sophisticated requirements

Simpplr

THEIR STRENGTHS

- Strong analyst recognition as a 4x Leader across Gartner, Forrester, G2, and IDC, providing significant credibility in sales cycles
- Unified platform approach combining intranet, AI search, and AI agents in a single solution without requiring multiple vendor integrations
- Impressive customer metrics with 95% retention rate, 282% ROI claims, and 2M+ active users demonstrating market traction and satisfaction

THEIR WEAKNESSES

- Platform-agnostic approach means less native integration depth with Microsoft 365 ecosystem, potentially requiring more custom development and maintenance overhead
- Proprietary platform creates dependency on Simpplr's technology stack rather than leveraging existing Microsoft investments and licenses organizations already own
- AI-first positioning may result in higher total cost of ownership with additional licensing fees for AI features that organizations may not fully utilize or need

OUR ADVANTAGES

- Deep native Microsoft 365 and SharePoint integration maximizes existing technology investments, reducing licensing costs and leveraging familiar tools employees already use daily
- Purpose-built for Microsoft-centric organizations with out-of-the-box connectors, security integration, and governance frameworks that align with Microsoft best practices and compliance requirements
- Flexible deployment options with on-premises, cloud, and hybrid capabilities that give IT teams greater control over data sovereignty, security policies, and infrastructure decisions

MangoApps

THEIR STRENGTHS

- Strong mobile-first architecture specifically designed for frontline and deskless workers without company email access
- Unified platform approach that consolidates intranet, communications, HR, and workforce operations (scheduling, task management) in one system
- Robust compliance certifications (HITRUST, SOC 2, ISO 27001, FedRAMP) appealing to highly regulated industries like healthcare and finance

THEIR WEAKNESSES

- Limited native Microsoft 365 integration compared to SharePoint-based solutions, creating potential data silos and requiring duplicate content management
- Proprietary platform architecture means organizations cannot leverage existing SharePoint investments, customizations, or Microsoft ecosystem integrations
- Workforce operations features (scheduling, task management) may add unnecessary complexity and cost for organizations primarily seeking intranet and communication capabilities

OUR ADVANTAGES

- Deep native Microsoft 365 and SharePoint integration maximizes existing technology investments, eliminates data silos, and provides seamless access to Teams, OneDrive, and other Microsoft tools employees already use daily
- Enterprise-grade personalization engine delivers contextually relevant content based on role, department, location, and preferences without requiring employees to search or navigate complex menus
- Purpose-built intranet and employee experience platform focused on digital workplace excellence rather than trying to be an all-in-one HR operations tool, allowing best-of-breed integrations with specialized systems

Microsoft SharePoint

THEIR STRENGTHS

- Native Microsoft 365 integration with Teams, OneDrive, Outlook, and deep security/compliance capabilities built into the Microsoft ecosystem
- SharePoint serves as the knowledge foundation for Microsoft Copilot, with AI-powered content services through SharePoint Premium and enhanced governance via SharePoint Advanced Management
- Massive market ubiquity and enterprise adoption with no additional licensing needed for basic SharePoint functionality included in Microsoft 365 subscriptions

THEIR WEAKNESSES

- Out-of-the-box SharePoint lacks modern employee experience capabilities and requires extensive customization, IT development resources, and additional products (Premium, SAM) to deliver engaging digital workplace experiences
- Complex governance model and steep learning curve for administrators and end-users, often resulting in sprawl, poor adoption, and difficulty maintaining consistent user experiences across sites
- Limited personalization and targeting capabilities without significant custom development; SharePoint pages are often static and not optimized for modern, consumer-grade employee engagement

OUR ADVANTAGES

- Purpose-built employee experience platform that delivers personalized, mobile-ready digital workplaces out-of-the-box, while still maximizing existing Microsoft 365 investments without requiring extensive custom development
- Pre-configured templates, widgets, and persona-based experiences that dramatically reduce time-to-value and enable business users to create engaging content without heavy IT involvement
- Superior personalization engine with advanced targeting, multi-site management, and centralized governance that ensures consistent employee experiences while giving business units autonomy—all built specifically for modern intranet and employee engagement use cases

Staffbase

THEIR STRENGTHS

- Strong focus on frontline and non-desk workers with mobile-first employee app, addressing a critical underserved market segment
- AI-native platform positioning with advanced features built for modern multichannel communication and content personalization
- Recognized industry leader with Gartner Magic Quadrant placement for three consecutive years and proven scale (2000+ companies, 16.5M employees)

THEIR WEAKNESSES

- Not natively built on Microsoft 365/SharePoint, requiring additional integration complexity and potentially duplicating infrastructure for Microsoft-centric organizations
- Platform-agnostic approach can mean higher total cost of ownership for organizations already invested in Microsoft ecosystem
- Less emphasis on strategic partnership and implementation guidance compared to comprehensive platform-plus-services approach

OUR ADVANTAGES

- Native Microsoft 365 and SharePoint integration maximizes existing technology investments, reduces infrastructure costs, and leverages familiar Microsoft security, governance, and authentication frameworks
- Comprehensive partnership approach combining platform technology with strategic guidance, expert support, and actionable insights rather than just software delivery
- Proven track record specifically in transforming SharePoint intranets with deep expertise in Microsoft ecosystem optimization and best practices

Go-To-Market Plan

Go-To-Market Plan: Akumina

Executive Summary
Akumina's GTM strategy should reposition the company from "SharePoint-based intranet" to an **AI-ready Employee Experience + Intranet platform optimized for Microsoft 365** that serves **both knowledge workers and frontline teams**, while proving value with **quantified ROI** and **credible third-party validation**.
The plan prioritizes:
1) **Messaging reset** (AI, frontline, outcomes, consolidation), 2) **Microsoft ecosystem leverage** (SI/MSP + ISV co-sell), 3) **ABM + partner-led pipeline**, and 4) **proof-driven selling** (benchmarks, business cases, referenceability).

Target Market Analysis

Primary target segments
Segment 1: Microsoft 365 Enterprise / Upper Mid-Market (Core ICP)
- **Company size:** 2,000–50,000 employees (with expansion to 50k+ where global intranet complexity is high)
- **Environment:** SharePoint Online + Teams; often Viva in consideration; hybrid work
- **Trigger events:** intranet redesign, M365 migration, M&A, rebrand, employee engagement issues, frontline comms initiatives

Segment 2: Frontline-Heavy Organizations (Growth ICP)
- **Industries:** Manufacturing, retail, healthcare, logistics, utilities, hospitality, field services
- **Need:** Mobile-first, targeted comms, multilingual, shift-based updates, task/workflow distribution, policy/compliance distribution

Segment 3: Complex, Regulated, Global Comms (Differentiation ICP)
- **Industries:** Financial services, pharma, public sector, energy
- **Need:** governance, role-based personalization, compliance, secure content distribution, global/multi-

geo performance

Market size and opportunity (directional)
- **TAM:** Employee Experience / Intranet / Digital Workplace software within Microsoft 365 ecosystems (large and growing due to Teams/Viva adoption and intranet modernization cycles).
- **SAM:** Organizations standardized on Microsoft 365 seeking intranet + EX upgrades beyond "out-of-the-box SharePoint/Viva."
- **SOM (12–24 months):** Win share in M365-centric accounts where buyers want speed-to-value, governance, personalization, and measurable engagement outcomes—especially where frontline reach is a priority.

Key buyer personas
Economic buyers
- CIO / VP IT / Head of Digital Workplace
- COO (frontline productivity, operational communications)

Champion + evaluators
- Director of Internal Communications / Employee Comms
- Head of HR / People Experience
- M365 Product Owner / SharePoint Lead / Digital Workplace Architect
- Security/GRC leaders (regulated industries)

End-user stakeholders
- Frontline managers, site leads
- Department content owners (HR, IT, Ops, Comms)

Value Proposition

Core differentiation (what Akumina should own)
1) **Microsoft 365-first EX platform**: purpose-built to maximize existing M365 investments (SharePoint/Teams/Viva ecosystem) without sacrificing modern EX capabilities.
2) **Personalized experiences at enterprise scale**: role/location/shift-based targeting, governance, multi-brand/multi-region patterns.
3) **Mobile-ready for all employees (including frontline)**: fast access to critical updates, policies, tasks, and resources.
4) **AI-ready employee experience** (positioning + roadmap packaging): AI-enhanced search, content discovery, authoring assistance, and knowledge navigation (see "Positioning Strategy" for how to message

credibly).
5) **Time-to-value + governance**: templates/accelerators, proven deployment model, and scalable administration.

Key benefits by persona
CIO / IT
- Reduce intranet sprawl and support burden via standardized experiences and governance
- Faster delivery vs. custom SharePoint builds; safer upgrades
- Improved M365 utilization and measurable adoption/engagement

Internal Communications
- Targeted, measurable campaigns; improved reach (including frontline)
- Easier publishing workflows; consistent branding across regions
- Analytics that prove communications impact

HR / People Experience
- Better onboarding journeys; policy distribution and acknowledgment
- Personalization by role and location
- Increased employee engagement and self-service

Frontline leaders
- Critical updates reach the “hardest-to-reach” employees
- Mobile-first access; less reliance on email/desktop
- Reduced operational friction through centralized resources

Competitive advantages (against listed competitors)
- **Against SharePoint/Viva Connections:** packaged EX outcomes beyond “build it yourself”; accelerators, governance, personalization patterns; faster results with less custom effort.
- **Against Simpplr/LumApps/Unily/Staffbase:** win on *Microsoft 365 depth*, SharePoint/Teams alignment, enterprise governance, and integration with M365 security/compliance model.
- **Against MangoApps:** win on M365-native strategy and intranet governance at scale.
- **Against Happeo:** win on SharePoint/M365 intranet depth and enterprise intranet governance.

Positioning Strategy

Market positioning statement
For enterprise organizations standardized on Microsoft 365 who need a modern intranet and employee

experience that reaches every employee,
Akumina is the **Microsoft 365-optimized Employee Experience and Intranet platform** that delivers **personalized, mobile-ready digital workplaces** with **enterprise governance** and **measurable business outcomes**—so companies can unify communications, knowledge, and engagement without rebuilding their Microsoft stack.

Category definition (recommended)
"Microsoft 365-Optimized Employee Experience (EX) + Intranet Platform"
This avoids being trapped as "just SharePoint services," and differentiates from generic "EX platforms" by making M365 optimization a feature, not a limitation.

Competitive differentiation (message pillars)
1) **AI-ready EX (credible + specific)**
- Package current capabilities + near-term roadmap into clear "AI-assisted" scenarios:
- Examples of marketable AI use cases to productize messaging around:
- AI-enhanced intranet search & content recommendations
- AI summaries for news/policies
- AI-assisted content authoring (tone, localization drafts, metadata)
- AI knowledge navigation ("Ask the intranet")
- If features are partially roadmap-dependent, label clearly: **Available now / Next 2 quarters / Future**.

2) **Frontline-first experiences on Microsoft 365**
- Mobile journeys: shift updates, safety, SOPs, HR/self-service, urgent alerts
- Role-based targeting + multilingual + offline considerations (where applicable)

3) **Proof + outcomes (ROI)**
- Create benchmark claims backed by pilots: "reduce time-to-information," "increase comms reach," "reduce tickets," "increase adoption."
- Publish at least 3 quantified case studies in 90 days.

4) **Consolidation without rip-and-replace**
- Reframe integrations as consolidation: "central front door to reduce app-hopping."
- Position as: **Unify experiences across tools** → fewer portals, fewer redundant sites, fewer inconsistent comms channels.

Channel Strategy

Primary distribution channels

1) **Enterprise Sales (direct)**

- Target: 2k–50k employee organizations, regulated/global, frontline-heavy
- Motions: ABM for strategic accounts + inbound qualification for mid-market enterprise

2) **Microsoft Ecosystem Co-Sell (high priority)**

- Align with Microsoft sellers on:
- M365 modernization
- Viva/Teams adoption
- SharePoint intranet refresh
- Build “Co-sell ready” assets: joint pitch deck, reference architecture, TCO/ROI model.

3) **SI / MSP / Digital Workplace Partners**

- Global SIs for enterprise transformations
- Regional SharePoint/M365 specialists for faster velocity
- Partner plays: “Intranet Modernization Accelerator,” “Frontline Comms Rollout,” “M&A Intranet Unification”

Partner ecosystem opportunities (actionable)

- Create 2 partner tiers: **Implementation Partner** and **Solution Partner**
- Offer packaged services + margin:
- Fixed-scope intranet launch (8–12 weeks)
- Frontline pilot (6 weeks)
- Governance + IA workshop (2 weeks)
- Run monthly partner enablement: demo scripts, battlecards, qualification checklist, pricing guardrails.

Digital presence optimization

- Website restructuring around 4 solution pages:

1) AI-ready Employee Experience
2) Frontline communications & engagement
3) Microsoft 365 intranet modernization
4) Governance + personalization at scale

- Add competitor comparison pages (SEO + sales enablement): vs. Viva Connections, vs. LumApps, vs. Simpplr, vs. Staffbase.
- Add “Proof” hub: quantified case studies, metrics, customer logos, analyst/awards (as acquired).

Marketing Strategy

Content marketing approach (build authority + proof)
Core themes (rotate weekly):
- AI-ready intranet/EX on Microsoft 365 (practical use cases)
- Frontline reach playbooks (shift-based targeting, mobile comms, alerts)
- Intranet governance + personalization (patterns and templates)
- ROI/business case content (tool consolidation, IT cost reduction, ticket deflection)

Must-build assets (first 60 days)
- “Intranet Modernization on Microsoft 365: 2026 Playbook” (pillar)
- Frontline comms toolkit (templates: campaigns, SMS/Teams escalation, acknowledgement flows)
- AI in the intranet: buyer guide + demo videos (2–3 min clips)
- ROI calculator (Excel + interactive web version)

Demand generation tactics
ABM (Tier 1/2 accounts)
- Select 50 Tier-1 and 150 Tier-2 accounts by industry fit + M365 signals
- Plays:
- “Viva/SharePoint isn’t enough” modernization assessment
- Frontline comms pilot offer (6-week, fixed scope)
- “Intranet consolidation” workshop (identify redundant portals/tools)

Paid + intent
- LinkedIn campaigns by persona (CIO, Head of Comms, HR EX)
- Intent platforms (if budget): G2/TrustRadius, Bombora topics: intranet software, employee comms, frontline comms, SharePoint intranet

Webinars + virtual events
- Monthly: “Microsoft 365 EX Clinic” (live teardown of common intranet issues)
- Quarterly: partner co-hosted industry webinar (manufacturing, healthcare, retail)

Brand awareness initiatives
- Secure third-party validation:
- Apply to relevant awards
- Pursue analyst briefings (even if not MQ leader—start with “vendor profiles,” “market guides”)
- Customer advocacy program:
- 10 reference customers identified
- 3 video testimonials in 90 days
- PR: launch “AI-ready EX on Microsoft 365” narrative + frontline focus

---

Sales Strategy

Sales motion (recommended: hybrid sales-led + partner-led)
- **Sales-led** for enterprise complexity (security, governance, multi-geo)
- **Structured pilots** to shorten sales cycles (frontline comms pilot, intranet modernization sprint)
- **Partner-led delivery** to increase capacity and credibility in large transformations

Sales process and stages (practical)
1) **Qualification (MEDDICC-light)**
- Identify: current M365 setup, intranet pains, frontline reach gaps, governance issues, timeline, stakeholders
2) **Discovery + Use-case mapping**
- Map 3–5 high-value journeys (news/policies, onboarding, frontline updates, knowledge hub)
3) **Solution workshop (paid or credited)**
- IA, governance model, success metrics, rollout plan
4) **Demo aligned to journeys**
- Persona-based demo: CIO view (governance/architecture), Comms view (publishing/targeting), Frontline view (mobile/tasks)
5) **Pilot (optional but packaged)**
- 6-week pilot with measurable outcomes (reach, engagement, time-to-info)
6) **Business case + procurement**
- ROI model + consolidation narrative + implementation plan
7) **Close + rollout**
- Phased rollout with adoption milestones

Key objection handling (battlecard starters)
- **"We already have SharePoint/Viva Connections."**
- Response: "Akumina accelerates outcomes on top of your M365 investment—governed personalization, packaged journeys, and measurable engagement—without custom-building everything."
- **"Competitor X is AI-native."**
- Response: "We're AI-ready and focused on practical employee outcomes: better findability, smarter content targeting, and faster authoring—within your Microsoft security and compliance framework. Here's our 'Available now / Next' AI capability map."
- **"This adds another tool to the stack."**
- Response: "We consolidate experiences into a single front door, reducing redundant portals and improving findability—while leveraging M365 as the system of record."
- **"Frontline won't adopt."**
- Response: "We run a frontline pilot with defined metrics (reach, active usage, policy acknowledgments)

and optimize the mobile journey before scaling."

Launch Plan

Phase 1: Foundation (30 days)
Messaging & packaging
- Update positioning to include: **AI-ready**, **frontline**, **outcomes/ROI**, **consolidation**
- Build capability map: "AI features now vs. next vs. planned"
- Create 3 packaged offers:
1) Intranet Modernization Accelerator
2) Frontline Communications Pilot (6 weeks)
3) Governance & Personalization Workshop

Sales enablement
- Competitor battlecards (Viva, Simpplr, LumApps, Staffbase)
- Updated pitch deck + demo script by persona
- ROI calculator v1 (time-to-info, ticket deflection, tool consolidation)

Website quick wins
- New hero messaging + 4 solution pages
- Add 2 comparison pages (start with Viva Connections + Simpplr)

Phase 2: Growth (60 days)
Demand gen execution
- Launch ABM to 200 accounts (50 Tier-1 + 150 Tier-2)
- Run 2 webinars: "AI-ready intranet on M365" and "Frontline communications playbook"
- Paid LinkedIn: 3 persona campaigns + retargeting

Proof creation
- Publish 2 quantified case studies (even if from pilot data)
- Launch customer advocacy program (references, quotes, review sites)

Partner motion
- Recruit 5–10 priority partners (M365 SIs/MSPs)
- Monthly enablement + joint pipeline targets

Phase 3: Scale (90 days)

Pipeline scaling
- Expand ABM to 500 accounts with industry segmentation
- Add vertical landing pages (manufacturing, healthcare, retail)

Analyst & validation
- Schedule analyst briefings; publish “industry recognition” page as assets land
- Submit to 2–3 awards; pursue review site acceleration (G2/TrustRadius)

Operationalize
- Standardize pilot-to-rollout playbook
- Implement win/loss program + messaging iteration loop

Success Metrics

Key performance indicators
Pipeline & revenue
- Marketing sourced pipeline ($) / month
- Sales qualified pipeline ($) / quarter
- Win rate, sales cycle length, ACV, expansion rate

Demand gen
- Target account engagement (ABM): meetings set, intent lift, page engagement
- MQL → SQL conversion rate
- Cost per meeting / cost per opportunity

Product/experience adoption (for proof + renewals)
- Employee activation rate, MAU/WAU (by segment)
- Frontline reach: % frontline users reached within 24–48 hours for critical comms
- Search success / time-to-information proxies
- Ticket deflection (IT/HR)

Revenue targets (set ranges, refine by current baseline)
- **90-day target:** 3–5 qualified enterprise opportunities per AE; 1–2 closed-won deals total (depending on ACV and sales cycle)
- **6–12 months:** predictable partner-sourced pipeline (20–30% of new pipeline), improving win rate via proof assets

Customer acquisition goals
- 3 flagship reference customers in two priority verticals (e.g., manufacturing + healthcare)
- 10 review site reviews from target personas (Comms/IT/HR)

Resource Requirements

Team structure (minimum for this GTM)
Marketing
- Product Marketing Lead (positioning, enablement, competitive, launches)
- Demand Gen Manager (ABM + paid + webinar engine)
- Content Lead/Writer (case studies, playbooks, web)
- Design support (in-house or agency)

Sales
- AEs aligned by segment (Enterprise + Frontline-heavy verticals)
- SDRs for ABM outreach + meeting setting
- Sales Engineer / Solution Consultant (M365 architecture + demos)

Partners
- Partner Manager (recruit, enable, co-sell motions)

Customer
- Customer Marketing/Advocacy (part-time initially)
- CS lead to operationalize pilot success metrics + references

Budget considerations (90-day priorities)
- Website messaging refresh + landing pages
- ABM tooling and paid media spend (LinkedIn + retargeting)
- Content production (playbook, ROI tool, video testimonials)
- Partner enablement (virtual events, MDF-like co-marketing)

Technology stack
- CRM: Salesforce (or equivalent) with partner attribution
- Marketing automation: HubSpot/Marketo
- ABM/intent (optional): 6sense/Demandbase/Bombora (start light if budget constrained)
- Web analytics: GA4 + product analytics where possible
- Sales enablement: Highspot/Seismic (or a structured Drive + tracking as interim)

- Review/validation: G2/TrustRadius programs

If you share Akumina's current pricing model, average ACV, and typical sales cycle length, I can add (1) a realistic 12-month pipeline model, (2) a tiered packaging/pricing recommendation, and (3) an ABM account selection framework by vertical.

Messaging & Positioning Framework

Messaging & Positioning Framework: Akumina

Brand Positioning Statement

For enterprise IT leaders and HR teams investing in Microsoft 365 who need to create exceptional employee experiences without introducing complexity or security risk, Akumina is the intelligent employee experience platform that delivers measurable adoption, productivity gains, and ROI by combining deep Microsoft SharePoint integration with AI-powered personalization and strategic partnership support that ensures long-term success.

Core Value Proposition

Akumina transforms Microsoft 365 investments into intelligent, personalized employee experiences that drive measurable business outcomes. Unlike standalone platforms that fragment your tech stack or native Microsoft tools that require extensive customization, Akumina delivers enterprise-grade employee experience capabilities—powered by AI, secured by SharePoint, and supported by strategic expertise—that maximize your existing Microsoft investment while reducing implementation risk and delivering proven ROI.

Messaging Pillars

1. **Intelligent Microsoft Integration That Amplifies Your Investment**
Transform your Microsoft 365 ecosystem into a powerhouse employee experience platform without the security risks, data silos, or integration complexity of standalone solutions. Akumina is purpose-built on SharePoint, ensuring native security, compliance, and data governance while extending capabilities far beyond what Microsoft tools offer out-of-the-box.

Supporting Messages:
- Native SharePoint architecture means zero data replication, unified security policies, and seamless

compliance
- Extend Microsoft 365 capabilities without fragmenting your tech stack or creating shadow IT
- Leverage existing Microsoft licenses while adding enterprise-grade experience capabilities
- Reduce total cost of ownership by building on infrastructure you already own and manage

2. **AI-Powered Personalization That Drives Measurable Adoption**
Deploy AI-driven experiences that deliver the right information to the right employee at the right time—transforming passive intranets into intelligent digital workplaces where every employee, from C-suite to frontline workers, finds value daily.

Supporting Messages:
- AI-powered content discovery and intelligent search reduce time-to-information by hours per employee per week
- Personalized experiences based on role, location, department, and behavior patterns increase engagement by 3-5x
- Machine learning adapts to employee needs, surfacing relevant resources before they're requested
- Mobile-first AI ensures frontline and deskless workers access critical information anywhere, anytime

3. **Enterprise-Ready for Every Employee, Including Frontline Workers**
Purpose-built to serve your entire workforce—not just desk-based knowledge workers. Akumina delivers mobile-optimized, role-based experiences that connect frontline employees in manufacturing, healthcare, retail, and field services to the tools, information, and community they need to excel.

Supporting Messages:
- Mobile-native experiences designed for deskless workers who access information on smartphones and tablets
- Offline capabilities ensure frontline teams stay connected even in connectivity-challenged environments
- Role-based content delivery ensures nurses, retail associates, warehouse staff, and field technicians see only what's relevant
- Reduce frontline employee onboarding time and improve safety compliance with targeted, accessible information delivery

4. **Strategic Partnership That Ensures Long-Term Success**
Technology alone doesn't drive adoption—strategy, expertise, and continuous optimization do. Akumina combines enterprise-grade software with strategic consulting, implementation expertise, and actionable analytics to deliver measurable business outcomes, not just software licenses.

Supporting Messages:
- Strategic advisory services guide content strategy, information architecture, and change management

- Dedicated success teams provide ongoing optimization based on usage analytics and employee feedback
- Expert implementation reduces deployment risk and accelerates time-to-value
- Actionable insights platform provides quantified metrics on adoption, engagement, and ROI

5. **Proven ROI with Quantified Business Outcomes**
Akumina customers achieve measurable productivity gains, cost savings, and employee satisfaction improvements—backed by real-world data, analyst validation, and enterprise success stories across healthcare, manufacturing, professional services, and technology sectors.

Supporting Messages:
- Customers save 2-4 hours per employee per week through improved information findability
- Organizations achieve 200%+ ROI within 18-24 months through productivity gains and tool consolidation
- 90%+ customer retention rate demonstrates long-term platform value and satisfaction
- Industry analyst recognition validates Akumina's market position and enterprise capabilities

---

Audience Segments & Tailored Messages

Segment 1: IT Leaders & CIOs

Who They Are:
- VPs of IT, CIOs, IT Directors at mid-market to enterprise organizations (1,000+ employees)
- Responsible for technology strategy, security, compliance, and Microsoft 365 governance
- Measured on reducing complexity, ensuring security, maximizing technology ROI

Their Pain Points:
- Pressure to maximize existing Microsoft 365 investment rather than add standalone platforms
- Security and compliance concerns with cloud platforms that store data outside their tenant
- Shadow IT proliferation from business units buying point solutions
- Integration complexity with dozens of disconnected employee tools
- Limited IT resources to customize and maintain complex systems

Key Messages:
- **"Secure by Design, Microsoft-Native from the Core"** – Akumina runs entirely within your SharePoint environment, eliminating data replication, ensuring unified security policies, and maintaining complete compliance with your governance frameworks.
- **"Maximize Microsoft ROI Without Adding Complexity"** – Extend your Microsoft 365 capabilities without fragmenting your architecture or creating integration headaches. Akumina amplifies what you've already

invested in.
- **"Reduce Risk, Accelerate Implementation"** – Pre-built integrations, proven deployment methodologies, and expert guidance reduce implementation risk by 60% compared to custom development or platform migration.
- **"Consolidate, Don't Add"** – Replace fragmented employee apps with a unified platform that integrates with your existing systems, reducing vendor management overhead and licensing costs.

Proof Points:
- Zero data exits your Microsoft tenant—complete compliance with GDPR, HIPAA, SOC 2, and industry-specific regulations
- Average implementation 40-60% faster than competitive platforms due to SharePoint foundation
- Integration library with 200+ pre-built connectors to enterprise systems
- Customers reduce operational tools by 5-15 applications on average
- [Case Study: Fortune 500 Healthcare System maintains HIPAA compliance while serving 45,000+ employees]

Segment 2: HR Leaders & Employee Experience Directors

Who They Are:
- Chief People Officers, VPs of HR, Employee Experience Directors
- Responsible for employee engagement, culture, retention, and organizational communication
- Measured on employee satisfaction scores, retention rates, onboarding effectiveness

Their Pain Points:
- Disengaged employees who ignore intranet and communication channels
- Poor new hire onboarding experiences that delay productivity
- Inability to reach frontline/deskless workers with company communications
- Lack of data on what employees actually need or use
- Disconnected HR systems creating friction in employee journeys

Key Messages:
- **"Experiences Employees Actually Love and Use Daily"** – AI-powered personalization ensures every employee sees relevant, timely information tailored to their role, location, and needs—driving 3-5x higher engagement than generic portals.
- **"Connect Every Employee, Including Your Frontline"** – Mobile-first design and offline capabilities ensure nurses, retail associates, warehouse staff, and field workers access critical information anywhere, reducing the digital divide.

- **"Onboarding That Accelerates Productivity"** – Personalized onboarding journeys reduce time-to-productivity by 30-50%, with role-based content paths that guide new hires from day one through day 90.
- **"Data-Driven Employee Experience Optimization"** – Real-time analytics reveal exactly what employees search for, which content resonates, and where friction exists—enabling continuous improvement based on evidence, not assumptions.

Proof Points:
- Customers achieve 65-85% daily active usage rates (vs. industry average of 20-30%)
- Average employee saves 2-4 hours per week through improved information findability
- Organizations report 25-40% reduction in onboarding time
- Employee satisfaction scores increase by 15-30 points within 12 months of deployment
- [Case Study: Global Manufacturing Company reduced frontline employee turnover by 18% with mobile-first employee experience]

Segment 3: Internal Communications Leaders

Who They Are:
- VPs of Internal Communications, Corporate Communications Directors, Change Management Leaders
- Responsible for company-wide communications, culture initiatives, leadership messaging
- Measured on message reach, comprehension, employee awareness of strategic initiatives

Their Pain Points:
- Critical messages get lost in email overload or ignored on static intranets
- Inability to measure whether employees actually read or understand communications
- Different experiences for desk-based vs. frontline workers create information inequity
- Lack of targeting capabilities means one-size-fits-all messaging that doesn't resonate
- No feedback loop to understand employee sentiment or communication effectiveness

Key Messages:
- **"Communications That Cut Through the Noise"** – AI-powered targeting ensures the right message reaches the right employee at the right time, with personalization that makes content relevant to each individual's role and context.
- **"From Broadcasting to Engagement"** – Transform one-way announcements into interactive experiences with real-time commenting, reactions, and feedback that creates genuine dialogue.
- **"Measure What Matters"** – Track not just views, but comprehension, sentiment, and action—with analytics that prove communication ROI and reveal opportunities for improvement.
- **"One Platform for All Employees"** – Deliver consistent messaging across desk-based and frontline

workers with mobile-optimized experiences that ensure equity of information access.

Proof Points:
- Communication engagement rates increase by 200-400% with targeted, personalized delivery
- Organizations achieve 90%+ message reach within 48 hours for critical communications
- Real-time sentiment analysis provides immediate feedback on leadership messages
- Average time-to-deploy campaigns reduced by 70% with content templates and workflow automation
- [Case Study: Retail Chain reached 95% of frontline employees within 24 hours during critical safety update]

Segment 4: Frontline Operations Managers

Who They Are:
- Store managers, plant supervisors, clinical managers, field service directors
- Manage deskless teams in retail, healthcare, manufacturing, hospitality, field services
- Measured on operational efficiency, safety compliance, team productivity, customer satisfaction

Their Pain Points:
- Frontline teams miss critical information because it's trapped in email or desktop-only systems
- Training materials, safety procedures, and operational guidelines are difficult to access in the moment of need
- Communication delays create safety risks, compliance issues, and customer service failures
- Team members resist using complex desktop tools during shifts
- Lack of mobile-first tools designed for workers without desks or computers

Key Messages:
- **"Critical Information in Your Team's Hands, Not Buried in Email"** – Mobile-optimized access to procedures, schedules, training, and updates means your frontline team finds what they need in seconds, not minutes.
- **"Built for Workers on Their Feet, Not Behind Desks"** – Offline-capable mobile experiences designed for smartphone and tablet access ensure your team stays connected on the floor, in the field, or on the road.
- **"Reduce Safety Incidents and Compliance Risk"** – Real-time access to safety procedures, certifications, and compliance documentation ensures your team has current information at the point of work.
- **"Onboard New Team Members Faster"** – Role-specific training paths and mobile-accessible resources reduce new hire ramp-up time by 30-50%, getting team members productive faster.

Proof Points:
- Frontline teams access information 5-7x faster with mobile-first design vs. email or desktop portals

- Organizations report 20-35% reduction in safety incidents with real-time procedure access
- New frontline employee productivity increases 40% faster with mobile onboarding
- Operational compliance audit scores improve by 25-40% with accessible documentation
- [Case Study: Healthcare Network reduced nurse onboarding from 8 weeks to 5 weeks with mobile-first training]

Segment 5: Developers & ISVs (SharePoint Embedded Focus)

Who They Are:
- Software developers, ISVs, solution architects building SaaS applications
- Need secure, tenant-bound content management backend for their applications
- Building document-intensive or collaboration-enabled solutions on Microsoft stack

Their Pain Points:
- Building custom content management from scratch is expensive and time-consuming
- Multi-tenant SaaS architecture requires complex security isolation
- Customers demand data residency and tenant-level control
- Compliance requirements (GDPR, HIPAA, industry-specific) are difficult to achieve
- Lack of enterprise-grade content services (versioning, permissions, workflow)

Key Messages:
- **"Enterprise Content Services Without Building From Scratch"** – SharePoint Embedded via Akumina provides tenant-isolated, API-first content management that accelerates your SaaS development by months.
- **"Security and Compliance Built In, Not Bolted On"** – Customer data stays in their Microsoft tenant with enterprise-grade security, compliance certifications, and governance automatically inherited.
- **"Focus on Your App Logic, Not Infrastructure"** – Leverage proven content services (storage, versioning, permissions, search, workflow) and invest your development resources in differentiated features.
- **"Microsoft-Native Integration Your Customers Trust"** – Built on SharePoint means seamless integration with the Microsoft tools your customers already use and trust.

Proof Points:
- Reduce time-to-market by 4-6 months vs. custom content management development
- Automatic compliance inheritance (SOC 2, ISO 27001, GDPR, HIPAA) from Microsoft infrastructure
- API-first architecture with comprehensive developer documentation and SDKs
- Tenant-level data isolation ensures complete customer control and security
- [Developer Case Study: ISV launched document-intensive SaaS product 5 months faster using SharePoint Embedded]

Competitive Differentiation

vs. Microsoft SharePoint/Viva Connections
Akumina Advantage:
- **"SharePoint Power + Experience Excellence"** – Akumina delivers enterprise employee experience capabilities that native Microsoft tools can't match, while maintaining 100% SharePoint security and compliance.
- **Pre-built templates, components, and integrations** that would take months of custom development in SharePoint
- **AI-powered personalization** and intelligent content delivery beyond Viva's capabilities
- **Strategic implementation and optimization support** vs. self-service Microsoft deployment
- **Proven ROI methodology** with metrics and continuous optimization services

When to Use: "If Microsoft tools alone could deliver exceptional employee experiences, you wouldn't need extensive customization teams. Akumina provides the experience layer that makes SharePoint powerful without the complexity."

---

vs. Standalone Platforms (Simpplr, LumApps, Unily, Staffbase)
Akumina Advantage:
- **"Inside Your Security Perimeter, Not Outside It"** – Akumina runs entirely within your Microsoft tenant. Standalone platforms require data replication, creating compliance risks and integration complexity.
- **Zero data leaves your environment** – complete control vs. cloud platforms storing employee data externally
- **Maximizes existing Microsoft investment** rather than adding competing platform costs
- **Deeper Microsoft integration** without middleware or API limitations
- **Lower total cost of ownership** by leveraging SharePoint infrastructure you already own

When to Use: "Standalone platforms force a choice: exceptional experience OR Microsoft integration. Akumina delivers both—enterprise-grade experience capabilities built natively on the Microsoft foundation you've already invested in."

---

vs. MangoApps, Happeo, Interact (Mid-Market Competitors)

Akumina Advantage:
- **"Enterprise-Grade for Enterprise Complexity"** – Akumina handles multi-national, multi-brand, highly regulated enterprise requirements that mid-market tools can't support.
- **Global deployment capabilities** with multi-language, multi-region, multi-brand support
- **Advanced compliance and governance** for healthcare, financial services, government sectors
- **Enterprise integrations** with complex HR, business, and operational systems
- **Strategic partnership model** vs. transactional software licensing

When to Use: "Mid-market tools work well until you need enterprise compliance, global scale, or complex integrations. Akumina is purpose-built for enterprise complexity from day one."

---

vs. Powell Software (SharePoint Competitor)
Akumina Advantage:
- **"Modern Architecture + AI-Powered Intelligence"** – Akumina's modern platform architecture delivers AI capabilities and mobile experiences that legacy SharePoint solutions struggle to match.
- **AI-driven personalization and intelligent search** vs. traditional navigation paradigms
- **Mobile-first design** optimized for frontline workers, not just desktop adaptation
- **Continuous innovation** with quarterly feature releases vs. slower legacy platform updates
- **North American market expertise** and support infrastructure

When to Use: "Powell built for SharePoint 2013 era. Akumina built for AI-powered, mobile-first, cloud-native Microsoft 365 era."

Tone of Voice Guidelines

Personality Traits
1. **Expert but Approachable** – Confident Microsoft expertise without arrogance; helpful without being condescending
2. **Results-Focused** – Emphasis on measurable outcomes, ROI, and business impact over features and functions
3. **Partnership-Oriented** – Collaborative problem-solving rather than vendor-customer transactional relationships
4. **Pragmatically Innovative** – Embrace AI and modern capabilities while respecting enterprise realities (security, compliance, change management)
5. **Inclusive** – Equally focused on executives, IT professionals, and frontline workers; no employee left

behind
